RESEARCH SUMMARY	My research builds reliable, safe, and scalable AI . I organize my work into two tiers: (1) advancing the scientific foundations of reliability and safety in modern AI systems, and (2) developing scalable infrastructure and applications that translate these foundations into real-world impact.	

Tier 1: Foundations of Reliable & Safe AI

I study principles that make AI models robust, predictable, and aligned under distribution shift, uncertainty, and adversarial pressures. This tier comprises two complementary directions:

1. Reliable Models (OOD & Anomaly Detection)

Developing algorithms and benchmarks that detect rare, unseen, or abnormal behavior across modalities.

| <input type="checkbox"/> Benchmarks & Evaluation | |

2. Safety of LLMs & Agents

Tier 2: Scalable Open Systems & Scientific/Societal Impact

I build open, scalable platforms and apply reliable AI methods to high-impact scientific and societal domains.

3. ML Systems (Infrastructure)

Designing efficient, reproducible, and open-source systems for model training, evaluation, deployment, and workflow automation. Open-source tools include **PyOD** (35M+ downloads) and related libraries with **22K+** GitHub stars.

4. AI for Science & Society (Applications)
