RESEARCH SUMMARY	My research builds <b>reliable, safe, and scalable AI systems</b> . I organize my work into two tiers: (1) advancing the scientific foundations of safety, robustness, and reliability in modern AI systems, and (2) developing system-level evaluation frameworks and applications that translate these foundations into real-world impact.	

## Tier 1: Foundations of Reliable & Safe AI

I study why and how modern AI systems fail under distribution shift, uncertainty, and strategic pressure, and develop methods to make their behavior more predictable and reliable. This tier integrates two complementary research threads:

### 1. LLM & Agent Safety

Understanding and mitigating failure modes in large language models and agentic systems, including hallucinations, jailbreaks, privacy leakage, model extraction, and multi-agent instability.

| <input type="checkbox"/> Jailbreak Detection      | <input type="checkbox"/> Failure Mode Analysis            |
| <input type="checkbox"/> Multi-agent Reliability  |   |

### 2. Robustness & Failure Detection (Methodological Foundations)

Developing algorithms and benchmarks to identify abnormal or unreliable behavior, grounded in robustness, out-of-distribution generalization, and anomaly detection.

| <input type="checkbox"/> Model Selection    |  |

## Tier 2: System-Level Evaluation & Scientific/Societal Impact

I adopt a system-oriented perspective to evaluate, stress-test, and deploy reliable AI in realistic settings, and apply these methods to domains where failures carry high cost.

### 3. Evaluation & Benchmarking (System Perspective)

Designing scalable evaluation frameworks, benchmarks, and workflows that probe model and agent behavior under realistic and adversarial conditions. Open-source tools include **PyOD** (35M+ downloads) and related libraries with **22K+** GitHub stars.

### 4. AI for Science & Society (Applications)

Applying reliable foundation models to high-impact scientific and societal domains, including climate and weather forecasting, healthcare and biomedicine, and political or social decision-making.
